

AHS Urinal Management

DID YOU KNOW?

The familiar stench of gent's urinals is due to the build-up of scale and uric salts. Deposits clog the pipes, providing a breeding ground for bacteria; once broken down it releases ammonia, 'that unmistakable odour'.

AHS Digital Urinal Sanitizer

offers programmable urinal maintenance to solve this common odour problem whilst combating costly blockages.

- Automatically injects a dose of 'good bacteria', selected for their digesting ability of waste materials. PH Neutral and environmentally friendly
- Attacks the bacteria growth at its source; eradicating the stench associated with urinals
- Inhibits scale formation, which eliminates down time of costly, messy blockages
- Depletes the breeding ground of bad bacteria; reducing cross infection in the work place from one person to another.
- Can be linked to AHS AutoFlush Water Saver; combining water saving with automatic pipe and drain maintenance.
- Complete, hassle free service from your designated AHS Service Technician.

Un-maintained

Bio-Breakdown

Is a safe 5ltr concentrated eco-cleaner; compatible with the biological agent of the Sanitizer System.

How does it work?

When activated in water the micro-organisms in this dilutable liquid produce three key enzymes that degrade fats, proteins and starch.

- Removes uric acid build-up and odours from toilet floors; areas that are often left untreated causing further malodours and staining.
- A 'live-working' product, creating bio-film to tackle new waste and offers 24 hour breakdown protection.
- Highly effective in the removal of oils, grease, food and human wastes.
- Versatile Product - Degrades waste in sinks, pipes, kitchen drains, grease traps and waste bins, tiles, carpets and floors.
- Cost effective – costs less than 30p per litre, depending on dilution rate.
- Three different application methods, cloth, mop and trigger.

BioPurge – Urinal Trap Treatment

Outlet pipes of urinals and shower cubicles often block with organic matter, causing slow drainage and bad odour. Cleaning these drains can be difficult, expensive and time consuming.

BioPurge is formulated to break down the surface of organic waste before releasing enzymes which eat through the waste helping to open the pipe.

This purge 'bomb' treatment is recommended prior to installing the AHS Urinal Sanitizer System or as regular scheduled deep treatments along-side the sanitizer system in high usage areas.
