

Safeseat

Toilet seat sanitizer

It is common knowledge that even seemingly clean surfaces of a WC can harbour vast numbers of harmful bacteria which can contribute to absenteeism in the work place.

DID YOU KNOW?

When a toilet is flushed water droplets containing faecal matter and 100's of bacteria are 'sneezed' into the air and float around for up to 30 minutes. The water droplets will evaporate leaving the bacteria and viruses to land on surfaces such as the toilet seat. Although not visible to the naked eye physical contact with these contaminated surfaces increase the risk of the spread of infection amongst washroom users.

Safeseat gives not only instant peace of mind for the user but considerably reduces the health risks associated with shared toilets.

For ease of use Safeseat is positioned in the cubicle beside the toilet tissue dispenser. The user dispenses the fragranced, quick drying spray onto the tissue. The risks of cross-infection from the previous user is quickly wiped away before use.

- **99.9% of germs killed** - including e-coli and HIV
- **Picture diagram shows clear instruction** - ease of use for all nationalities
- **Available at the point of need** - for immediate, individual use
- **Sanitizer solution** - reducing absenteeism
- **Fresh fragranced spray** - pleasant to use and immediate drying
- **Useable on other contact points** - sanitary unit, toilet flush and door handles
- **Prevents hovering** - a common cause of urinary tract problems
