

WC Sanitizer

Reducing absenteeism

DID YOU KNOW?

Every time a toilet flushes, microscopic droplets shoot over 6 ft through the air from the toilet bowl. The 'Sneeze' effect contains a cocktail of bacteria leading to various common illnesses.

'What you can't see CAN hurt you'

- Sickness and diarrhea
- Kidney problems
- Urinary tract infections
- Sore throat
- Flu-like symptoms
- Skin infections

After landing, each bacteria breeds rapidly and can live for days afterwards providing ample time to infect the next unsuspecting person.

- Kills up to 99.3% of bacteria and germs in the first flush, providing a safe environment for each and every user.
- Foam concentrate removes unsightly surface matter – constantly working throughout the day.
- Helps to prevent limescale from forming – leaves no foothold for bacteria to breed.
- Discreet 'auto' unit feeding a measured dose of sanitizer solution into the flush water on every flush – always working with nothing for your staff to do.

AHS WC Sanitizer reduces the risk of cross infection amongst staff and visitors, bringing about peace of mind in a shared working environment.

* floating bacteria

Sustainability – Preventing the over use of toilet chemicals by providing a programmable measured dosing service.
