

Hand Drying

Plasma FastDry Technology

Plasma Hand Dryer

A healthy new approach to hand drying which not only delivers a **10 second dry**, but provides **instant infection control**, helping to reduce sickness in the work place. Plasma FastDry is a new method of killing harmful bacteria as it deodorises shared environments and stops the growth of mildew and air pollution.

Plasma Technology kills **80%** of bacteria upon contact, preventing the spread of germs including **E.coli, C.diff and MRSA**, on and around your hands naturally, with **no chemicals**.

Allergy Friendly Ions are created when air passes through a neutralisation of positive and negative electrical charge, releasing energy. Ions from the ultraviolet rays will charge the particles of dust and impurities in the air and eradicate them.

Photo-catalyst Oxidation destroys the cell membrane of bacteria and oxidises the proteins of viruses. Since these particles are constantly split and oxidised, no impurity remains, just clean air and safe exposed surfaces.

Also available in black & white

Specification:

- IPx1 Rated
- Sound Level 78db
- Air Velocity 95 m/s
- Adjustable Power 550W - 1.4W
- Supply Voltage 220-240v volts 50/60Hz
- 295mm x 320mm x 220mm (H x W x D)

Proven Technology - Kills over 80% of bacteria on your hands whilst drying them!
